COMMITTEE ON THE ELIMINATION OF
DISCRIMINATION AGAINST WOMEN

CONSIDERATION OF REPORTS SUBMITTED BY STATES PARTIES UNDER
ARTICLE 18 OF THE CONVENTION ON THE ELIMINATION OF ALL
FORMS OF DISCRIMINATION AGAINST WOMEN

Initial and second periodic reports of States parties

Addendum

PARAGUAY

The following additional information was received from the State party
relating to its combined initial and second periodic reports (CEDAW/C/PAR/1-2
and Add.1).

ANNEX I

Extracts from the 1995 national report on human development
from the gender perspective */

DEMOCRATIZATION IS THE MOST IMPORTANT STEP WHICH PARAGUAY HAS TAKEN IN THE DIRECTION OF HUMAN DEVELOPMENT, BUT THE EXCLUSION OF WOMEN FROM POLITICAL LIFE IS UNDERMINING THE ACHIEVEMENTS

One of the fundamental elements of human development described in the Human Development Report 1993 of the United Nations Development Programme (UNDP) is the participation of citizens in decisions which affect them. After lagging behind for decades Paraguay joined the movement towards democratization in 1989. From that year constant progress has been made with respect to freedom, tolerance and institution-building.

However, according to the national human development report, the first one which UNDP requested Paraguay to produce, the low level of participation by women in the administration of the State and in political parties and social organizations is a sign of weakness. Paraguayan women, who make up half of the population, have expressed their desire for political participation. The topics of greatest concern relate in fact to their low rate of participation in the taking of decisions on regulations which are binding on the whole of society, in the conduct of public affairs, in the distribution of social resources, and in the administration of justice.

The comparative figures for men and women indicate that inequalities persist in political participation. Of the 198 delegates to the 1992 National Constituent Convention, 177 (89.4%) were men and 21 (10.6%) were women. No woman has been a candidate for the Presidency of the Republic, and only one woman has been a candidate for the Vice-Presidency with any possibility of being elected. All 17 governors elect are men.

Only one woman has ever held any of the 11 portfolios of State. This was Cynthia Prieto Conti, appointed Minister of Health and Social Welfare on 18 November 1989. She held this post until the end of the transition on 15 August 1993. At present there are no women in charge of any of the ministries. But an important step forward was taken with the 1992 decision to create the Department of Women, which came into being in 1993, headed by Cristina Muñoz with the rank of minister.

The first two women ambassadors of Paraguay were appointed in 1994, to the Governments of Bolivia and Colombia. These appointments

*/ See CEDAW/C/PAR/1-2/Add.1, section III.

marked the crossing of yet another barrier for women, who are legally qualified to hold any post.

The composition of the Congress changed radically in 1993. Firstly because the Chamber of Deputies moved on to a regional representation basis as stipulated in the Constitution. Secondly because the National Republican Association (ANR - Colorado Party) saw the number of seats which it held decline from 66% in both chambers to 44.5% in the Senate and 47.5% in the Chamber of Deputies. Accordingly, the opposition came to hold an absolute majority in the Congress. Paraguay has undergone a clear increase in political pluralism, but the low rate of gender pluralism has not changed, for the participation of women remains 5.6%.

It is encouraging that, despite their low participation in numbers, women have found creative ways of securing attention for their proposals and having them approved. A successful "women's cross-bench" in the National Assembly achieved the establishment of the legal equality of men and women without restrictions, as well as the bases for positive action.

It is hoped that the near future will see the fruits of the joint efforts made in this field by the Department of Women, inter-party organizations, social organizations, research institutions and multilateral agencies. The participation of both sexes in decision-making bodies is a key element in the consolidation of democracy and human development, which are incompatible with the exclusion of half the population.

RECOGNITION AND EXERCISE OF RIGHTS: EQUALITIES AND INEQUALITIES

Since the middle of this century the process of legal reform in Paraguay has been enriched by the contributions of women's organizations and by the progress made in international instruments and similar legislation.

In 1954 Law No. 236 on the civil rights of women granted women exercise of civil rights for the first time, but with a restriction to single women and widows, since under the Civil Matrimony Act in force at that time married women were subject to the restrictions imposed by the Act.

In 1961 Electoral Law No. 600 established equal political rights for men and women. And in 1963 the Agrarian Statute explicitly stated the equal right of men and women to hold land.

In 1986 Paraguay ratified the Convention on the Elimination of All Forms of Discrimination against Women, and 1987, surprisingly, saw the promulgation of a Civil Code which made an explicit distinction between the rights of men and women in matrimony. In the following year the Coordination Committee of Women of Paraguay (CMP) submitted to the National Congress a proposed change in the Civil Code which had to wait until 1992 for enactment.

Paraguay's Divorce Act was promulgated in 1991; this was the first law to allow the termination of the legal bond of marriage and the possibility of remarriage with equal rights for men and women.

The year 1991 saw the enactment of Law No. 104, which decriminalized adultery and introduced penalties for the prostitution of others and the trade in women.

The first National Constitution was adopted in June 1992; it provided equal rights for men and women and a mandate for the use of positive discrimination in favour of women.

That same year saw the enactment of Law No.1, which partially amended the Civil Code by removing the discrimination between spouses and providing identical legal status for men and women and a number of other equal rights in marriage. A partial reform of the Minors' Code was also introduced in 1992, providing equal rights for both parents with regard to their minor children.

The new Labour Code was enacted in 1993, providing equal rights for men and women in employment but with a veto for the executive on some key articles relating to the rights of women.

In June 1995 the Government of Paraguay ratified the Inter-American Convention on the Prevention, Punishment and Eradication of Violence Against Women.

Despite this significant progress with respect to equality of rights, explicit disparities remain in penal law: the Criminal Code, the Code of Criminal Procedure and the legislation on Paraguay's prison system. At present, both the Criminal Code and the Code of Criminal Procedure are undergoing substantial reform based on proposals submitted to the National Congress by various governmental bodies and non-governmental organizations. The debate has not been an easy one. It is hoped that new penal legislation will put an end to the discrimination, subordination and restrictions imposed on women under the existing legislation.

PROGRESS...INSUFFICIENT

The advances made by women over the past 20 years are indisputable but...insufficient. Gender considerations in development are novelties for the civil society and State of Paraguay. Unless the

/...

vital need for the participation of women is acted upon, a distorted concept of development will persist.

Women have made progress in education, legislation and self-organization. Between 1961 and 1962 equality of rights was established in the Electoral Act, the Agrarian Statute, the Divorce Act and the Civil Code. The 1992 Constitution, which lays the foundations for democratic coexistence, recognises and encourages the equality of the sexes. Almost equal numbers of boys and girls have been attending primary and secondary schools in the past decade, but there is a slight majority of males in the universities. Furthermore, the maternal death rate has fallen, and the decline in the birth rate has meant an expansion of the opportunities available to women. Women's organizations have increased in number, visibility and importance in recent decades. The Coordination Committee of Women of Paraguay was established in 1987. Five major women's associations were created and consolidated between 1989 and 1995.

But discrimination persists even in these areas. Six of every 10 illiterate persons are women. Twenty-three out of every 100 deaths are by abortion, and Paraguay has one of the highest such rates in the region. The articles of the new Labour Code dealing with gender rights have been vetoed. Women's organizations are still small but they represent a significant advance in a society characterized until very recently by the absence of any sign of organizational vitality.

The structures of discrimination remain solid in other areas such as economics and politics. Farm women are excluded from labour statistics, and urban and rural domestic work is disregarded. In both cases such workers are considered to be economically inactive. Women receive lower pay than men for equal work. In the current five-year period in the metropolitan area of Asuncion women have been paid at only two thirds of the rate for men. The maintenance of economic discrimination is buttressed by the under-representation of women in decision-making bodies. This regrettable situation is not limited to the State. Among the drafters of the new Constitution there was only one woman for every nine men; during the transition (1989-1993) there were one female and 12 male ministers, and two female and 18 male under-secretaries. Women hold 14% of the posts in the administrations of political parties but still none of the principal ones.

Although today women have a similar standard of education to that of men and in fact make a very large contribution to the gross product, the fact that their work is not recognized, less well paid and undervalued means that this contribution is not reflected in the statistics. For example, in the 1992 population census the participation of women in the agricultural sector was recorded as 1.5%, but according to the figures of the 1991 agricultural census, which included permanent and occasional women workers in this sector, the participation rate was 64.5% - 43 times higher. Moreover, if women engaging in paid and unpaid domestic work are taken into account, the total female participation rate rises considerably.

/...

Some progress has been made with respect to institutions, for example the creation of the Department of Women and the enactment of the legal basis for affirmative public action to achieve real equality. But there is very little investment in women. Between 1994 and 1995 it varied between 0.6 and 6 per cent of the national budget. Accordingly, the participation of women in development will remain invisible and receive little attention. Even investment in research into women's questions is a novelty, being conducted almost exclusively by women and in most cases financed by international foundations. In the past quarter of a century only 1% of publications by men have focused on this topic.

A big cultural change is in progress. The thinking and practices which seek to reverse age-old inequalities and discrimination against women are spreading. Only when men and women stand at the centre of development and on terms of gender equality will it be possible to make full use of every individual's creativity and productivity. Human development is essential to the fight against underdevelopment and for a sustainable environment.

WHOSE SITUATION COUNTS IN PARAGUAY?

Paraguayan society is heterogeneous. This diversity is not neutral. There are power relationships between the different groups. In some cases, for example in matters of religion, race, age and ethnic group, it is the minorities which are discriminated against. In other cases it is the majorities, for example the peasants and people who speak only Guarani. But one characteristic is common to all the groups. In every one of them there are men and there are women. Paraguay has a population of 4,152,588; 49.8% are women and 50.2% men, but the women are always disadvantaged.

This has been a topic of debate in Paraguay. The country was maintained by women's work during the two international wars in which it was involved. For a long time women constituted the majority who rebuilt the country. This was the source of the myth of a matriarchy in Paraguay. Responsibility was confused with power. It had to be demonstrated from the data that Paraguayan women lived in a situation of inferiority to men.

The capacity of women to reproduce the human species served and still serves to justify a rigorous sexual division of labour and social power. Women are concerned with reproduction and matters of little social importance, and men are concerned with important public and production matters.

Pioneering studies which argue that it is unnatural to maintain a strict sexual division of labour and the separation of private and public affairs - and which have had great influence in Paraguay - include the works of Simone de Beauvoir and Margaret Mead. While it is true that Serafina Dávalos included in her study a whole chapter

/...

demonstrating that "the enslavement of women is unnatural", Paraguayan researchers of the 1980s were influenced more by Anglo-Saxon and other Latin American publications than by those of their local forerunners.

Since the first national encounter of women held in Asuncion in 1987, the commonest term used, which encompasses the various unfair sex and gender situations, is discrimination. Exclusion is the most serious form of discrimination. Paraguayan society manifests various forms of exclusion, some of them stated in explicit rules such as the rules of the Catholic Church barring women from the priesthood and the rules of the armed forces which deny women the possibility of a military career. In other cases women are excluded even though the opportunities are legally open to them; one example of this is the lack of women in the highest positions in the judiciary, in the Office of the President of the Republic, and in the senior posts in political parties, trade unions and peasant organizations.

In such cases it can be argued that Paraguay has a "glass ceiling", an invisible barrier to access by women beyond recognition of their rights and development of their potential.

One of the biggest risks is to approach discrimination against women as a question of conscious oppression of women by men despite the wish of women to occupy a different status. In reality, both sexes are part of the same culture which builds and maintains the gender roles.

Development plans are also a product of this culture and have reflected the prevailing social order. The gender perspective has been the big missing link in these plans, as a result of which they have not tackled the women's problem in its true dimension.

An analysis of the various economic and social development plans of the past four decades bears out this assertion and also demonstrates the fundamental role of the State in deciding which development policies are carried out in Paraguay. The State thus becomes an institution which, since it does not recognize the discrimination against women, does not take action to reverse it.

In the 1970s the development plans drawn up by the Technical Secretariat for Planning made no mention of the women's problem. Only in the chapter of the 1977-1981 National Plan referring to the social sectors as one of the targets of the human resources and employment sector is any mention made of women as an underused resource in the labour market. However, this reference was merely rhetorical, for in practice no machinery was introduced to change the situation.

The Decade for Women, which began in 1976 and ended in 1985 with the World Conference on Women in Nairobi and the adoption of the Nairobi Forward-Looking Strategies for the Advancement of Women, did not mean any change of the attitude of the Paraguayan State towards the overwhelming discrimination against women. The 1985-1989 National

/...

Economic and Social Development Plan, like its predecessors, did not contain among its development policies and strategies any specific mention of the topic of women.

In 1989 a coup d'état put an end to the dictatorship which had ruled the country for almost four decades. That year saw the drafting of a National Emergency Plan whose general social development objectives included, for the first time, a mention of the advancement of women. Furthermore, in its treatment of the topic of social policies it underlined the need to transfer public resources to activities connected with the education, nutrition and health of women. This Plan also contained an entire chapter on the women's problem under the heading of advancement of women. The Plan constituted an improvement on earlier ones but it had its limitations. They ranged from an incomplete diagnosis of the Paraguayan situation to excessively general proposals which did not facilitate the determination of strategies which would have a real impact in altering the status of Paraguayan women.

The creation of the Department of Women in 1992 and the start-up of its operations in 1993 constituted the most important action taken by the State with respect to women. The Department is responsible for ensuring that the gender perspective is an integral part of all development plans.

It is important to point out that, although the State is giving greater attention to women's matters, both in the latest Development Plan and by creating the Department of Women, this concern is not reflected in the amounts invested in women. An analysis of various statistical sources made for the purpose of this report indicates that in Paraguay the level of investment in projects intended directly or indirectly for women ranges between 0.3 and 6 per cent.

Paraguay has not reached the macro-level at which "the action of the State reflects its claim to neutrality with respect to gender relations". It is essential for this situation to be changed, for women to increase their influence in decision-making bodies and in other areas where decisions are taken which compromise the future of all men and all women.

To promote human development centred on the quality of life of both parts of the human race is a challenge which must be taken up in order to achieve a society in which one half of the population does not feel itself excluded.

Contribution of women

The "power" of women is rhetorical

The idealization of the purpose of women in popular rural songs and poetry would seem to represent the image of Paraguayan women in general. This ideal image is in essence: the stoical mother. In several cases motherhood is compared with the idea of the Virgin, Mother of God, and it would seem that there is nothing higher which merits greater worship.

"I conjure up from afar your childlike face Tupasyimi..."
"Epayna che tupasy...", etc.

These rhetorical figures express an exalted image of the real status of women - unequal and subject to discrimination, as described in the section on production - but society would seem to disown its socio-historical guilt, justifying this unfair relationship with the rhetorical generalization that "the Matriarchy rules in Paraguay".

The daily situation of rural women does not correspond, in terms of decisions, actions and opportunities of effective or institutional influence, to the situations which define a system as "matriarchal", an all-embracing system of the distribution and exercise of the power of women in a local community. If by chance any leadership exists (in the case of Paraguay) it is in the taking of decisions in the household.
